

Procurement Policy

Policy PR-001 - Third-Party Technology Procurement

Organization: Northstar Financial Services (NFS)

Classification: INTERNAL - TRAINING

Effective date: September 2026

1. Purpose

This policy defines the mandatory process for acquiring technology products and services for Northstar Financial Services (NFS). It applies to software, SaaS, cloud services, AI systems, consulting services and outsourced processing.

2. Approval thresholds

2.1 Up to EUR 25,000 annual value

Business owner and Procurement approval are required.

2.2 EUR 25,001-100,000

Business owner, Procurement and Finance approval are required.

2.3 Above EUR 100,000

Business owner, Procurement, Finance and the Technology Investment Committee must approve the purchase.

3. Mandatory vendor due diligence

All vendors that process NFS information must complete the security questionnaire and provide evidence of security controls. Vendors processing Confidential or Restricted information require Information Security approval before contract signature.

4. AI procurement requirements

AI systems must undergo AI Governance review. The business owner must document intended use, affected users, data categories, expected benefits, material risks and human oversight. High-risk AI use cases cannot be approved solely by an automated recommendation.

5. Competitive sourcing

Purchases above EUR 50,000 should normally include at least three comparable offers. A single-source exception requires written Procurement justification.

6. Evidence and audit trail

The final procurement decision must be traceable to source documents. Material claims about security, compliance, pricing or contractual commitments must cite supporting evidence.

7. Exceptions

Policy exceptions require documented approval from the Head of Procurement and the accountable risk owner. Missing evidence must never be interpreted as evidence of compliance.
